Islamabad, Pakistan

SUMMARY

Motivated Software Engineering student at SZABIST Islamabad with hands-on experience in Python, machine learning, and robotics automation. Experienced in developing practical projects including a Bank Network System and a Student Record Management System. Currently building a Predictive Maintenance System for jet engine fault detection as a Final Year Project. Seeking internship or graduate roles in Machine Learning or Software Development to apply and expand technical skills in real-world environments.

EDUCATION

BS Software Engineering	SZABIST University, Islamabad	2023 – 2027
Intermediate (FSc/ICS)	Allama Iqbal College, Bagh	2021 – 2023
Matriculation	Read Foundation School, Bagh	2019 – 2021

EXPERIENCE

Intern – Robotics & AI	— NAVTTC	3 Months (Ongoing)
- Built and trained machine learning models for AI-based robotic systems, achieving strong classification performance on curated datasets. - Prepared and preprocessed datasets for robotics pipelines using Python, and developed automation scripts for data processing tasks. - Gained practical knowledge of robotics fundamentals, automation concepts, and AI-driven systems.		

PROJECTS

Predictive Maintenance System	<i>(FYP)</i>	<i>Python, Machine Learning</i>
A machine learning-based system to predict and detect faults in jet engines using sensor data analysis. Analyzes real-time sensor patterns to identify anomalies at an early stage, helping prevent failures and reduce maintenance costs. Built using Python and data science techniques.		
Bank Network System		<i>Cisco Packet Tracer, Networking</i>
Designed and simulated a secure bank network infrastructure using Cisco Packet Tracer. Configured routers, switches, VLANs, and subnets to reflect a realistic multi-department banking environment. Focused on network security, traffic segmentation, and reliable inter-department communication.		
Student Record Management System		<i>C++, OOP</i>
Developed a console-based student record management application using C++ and Object-Oriented Programming principles. Supports adding, searching, updating, and deleting student records with file-based data persistence. Demonstrates strong understanding of classes, inheritance, and file handling in C++.		

CERTIFICATIONS

Robotics & AI Training	NAVTTC	2025 – Ongoing (In Progress)
-----------------------------------	--------	------------------------------

SKILLS

Languages	Python, C++, Java, HTML, CSS
Tools & Software	VS Code, PyCharm, Git, GitHub, Cisco Packet Tracer
Concepts	Machine Learning, Dataset Training, Robotics Fundamentals, OOP, Networking
Soft Skills	Problem Solving, Team Collaboration, Self-Learning, Time Management

LANGUAGES

English	Proficient (Verbal & Written)	Urdu	Proficient	Kashmiri	Native / First Language
----------------	-------------------------------	-------------	------------	-----------------	-------------------------
